PRICES FOR SUMMER OF 1911

All cactus cuttings or plants should be planted in the warm Summer months. Plant one third of the cutting under the soil, two thirds above. After planting keep rather dry until they begin to root or to show new leaf buds after which they will endure more moisture.

Most of these varieties are wholly new and the stock limited, no one on earth having a single plant except these now growing on my experiment farms.

These prices given are for June and July delivery. Twenty-five per cent discount from these prices will be allowed for August and September deliveries. Freight or express charges to be paid by purchaser. All cuttings and plants lightly and carefully packed, no charge for boxes or packing. Smaller cuttings can sometimes be sent by mail.

ROBUSTA and SPECIAL

Cuttings each 80c; per ten \$4; per hundred \$30; per thousand \$200.
Well rooted plants double these prices.

ELDORADO, COMPETENT, SIGNAL and TITANIA
